BARK BOX[®] MUFFLER COVER

WHAT MAKES THE BARK BOX DIFFERENT THAN OTHER MUFFLERS ON THE MARKET?

With over 40,000 units in circulation, our patented design has been a proven leader in the market since 2019. The spark arrester screen meets or exceeds forest service requirements in Washington, Oregon, and California. In addition, we offer a one-year replacement warranty – no questions asked.

COOLER RUNNING TEMPERATURES

ROWDY SOUND

6-10% HORSEPOWER GAIN

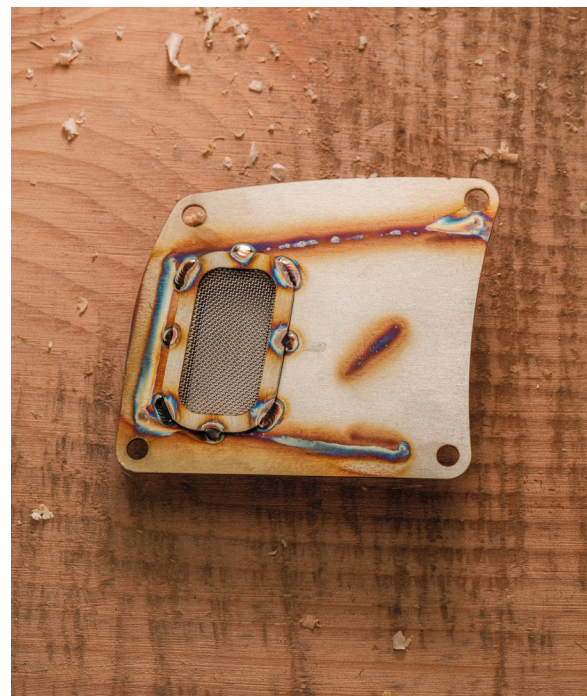

(MADE OF)
304 STAINLESS STEEL

MADE IN THE USA

ONE-YEAR WARRANTY

MOST COMMON BARK BOX CUSTOMER QUESTIONS

Do you make a Bark Box for my saw?

We make a bark box for most Stihl-brand two-piece mufflers. If your model is not listed on our website model drop-down list, it's incompatible with a Bark Box. Most likely, your saw has a one-piece muffler.

We don't make a Bark Box for Husqvarna saws; they all have a one-piece muffler.

Do you make a Bark Box for an 064?

Yes, please call to place a special order. In some cases, the 660 Bark Box will be compatible with the late model 064. Call/email for fit specifications before ordering.

Do you make a Bark Box for a Stihl ms261?

No, because the ms261 has a one-piece muffler. We offer a Universal Exhaust Power Port sized specifically for the ms261. This can be installed with included hardware or plug welded onto the muffler. See our video for instructions.

Do I have to tune my saw after installation?

If your saw is Mtronic or fuel-injected, no tuning is necessary. It will self-adjust.

If your saw is carbureted, you'll need to make a manual adjustment. As a general rule, whenever you open up the muffler, you need to add fuel.

INSTALLATION TIPS

- 1 Remove the four bolts holding on the front plate of your current muffler cover
- 2 Swap the Bark Box in place of your previous cover
- 3 Reinstall the four bolts

460/461 Bark Box Only: Bend over the screen tabs during installation so the cover sits flush. See our videos page for more information.

Gasket Tip: There is a gasket on some muffler models. When removing the factory muffler cover, go slowly to prevent the gasket from tearing. If it's still intact, the gasket can be reused with the Bark Box. However, the gasket is not required.

Installation Note: If your saw is Mtronic, it will be tuned in by the third or fourth cut after installation. Let it idle briefly after installation.
